# GRUPO SQL POR Declaración

Anterior

A continuación?

# La instrucción SQL GROUP BY

La instrucción GROUP BY agrupa filas que tienen los mismos valores en filas de resumen, como "buscar el número de clientes en cada país".

La instrucción GROUP BY se utiliza a menudo con funciones de agregado (COUNT, MAX, MIN, SUM, AVG) para agrupar el conjunto de resultados por una o varias columnas.

### **GROUP BY Syntax**

```
SELECT column_name(s)
FROM table_name
WHERE condition
GROUP BY column_name(s)
ORDER BY column name(s);
```

## Base de datos de demostración

A continuación se muestra una selección de la tabla "Clientes" en la base de datos de ejemplo Northwind:

| CustomerID | CustomerName                             | ContactName           | Address                             | City           | Posta    |
|------------|--|-----------------------|-------------------------------------|----------------|----------|
| 1          | Alfreds<br>Futterkiste                   | Maria Anders          | Obere Str. 57                       | Berlin         | 12209    |
| 2          | Ana Trujillo<br>Emparedados y<br>helados | Ana Trujillo          | Avda. de la<br>Constitución<br>2222 | México<br>D.F. | 05021    |
| 3          | Antonio Moreno<br>Taquería               | Antonio<br>Moreno     | Mataderos<br>2312                   | México<br>D.F. | 05023    |
| 4          | Around the Horn                          | Thomas Hardy          | 120 Hanover<br>Sq.                  | London         | WA1 1    |
| 5          | Berglunds<br>snabbköp                    | Christina<br>Berglund | Berguvsvägen<br>8                   | Luleå          | S-958    |
| 4          |  |                       |                                     |                | <b>•</b> |

# SQL GROUP BY Ejemplos

La siguiente instrucción SQL muestra el número de clientes en cada país:

# Ejemplo

```
SELECT COUNT(CustomerID), Country FROM Customers
GROUP BY Country;
```

Pruébelo usted mismo »

La siguiente instrucción SQL enumera el número de clientes en cada país, ordenados de alto a bajo:

## Ejemplo

```
SELECT COUNT(CustomerID), Country
FROM Customers
GROUP BY Country
ORDER BY COUNT(CustomerID) DESC;
```

Pruébelo usted mismo »

# Demo Database

Below is a selection from the "Orders" table in the Northwind sample database:

| OrderID | CustomerID | EmployeeID | OrderDate  | ShipperID |
|---------|------------|------------|------------|-----------|
| 10248   | 90         | 5          | 1996-07-04 | 3         |
| 10249   | 81         | 6          | 1996-07-05 | 1         |
| 10250   | 34         | 4          | 1996-07-08 | 2         |

And a selection from the "Shippers" table:

| ShipperID | ShipperName      |
|-----------|------------------|
| 1         | Speedy Express   |
| 2         | United Package   |
| 3         | Federal Shipping |

# **GROUP BY With JOIN Example**

The following SQL statement lists the number of orders sent by each shipper:

### Example

```
SELECT Shippers.ShipperName, COUNT(Orders.OrderID) AS NumberOfOrders FROM Orders

LEFT JOIN Shippers ON Orders.ShipperID = Shippers.ShipperID

GROUP BY ShipperName;
```

# Test Yourself With Exercises

# **Exercise:**

List the number of customers in each country.

```
SELECT (CustomerID),
Country
FROM Customers
```
